- I worked on the Contact Information and Social Media part of my Portfolio, turning my links into Icons, and adding the necessary CSS to make them stand out more
- I also added a navigation bar at the top to go to my different pages, which I do not have set up at this point
- I worked on the bio part of my Portfolio as well making it look aesthetically appealing and also made it so when you hover over it, the section increases if you can't read it
- I added my Resume as a photo and also added a button that takes you to the PDF file where you can download a copy of my resume

Additional Elements:
  - I added CSS Hover effects to my icons which change the color and position of the icon
  - I changed the cursor so when you hover over links and icons, the cursor changes to pointer
  - Made it so when you click on my button it opens in a new tab, instead of staying on the same tab
